

Turn Signal Switch

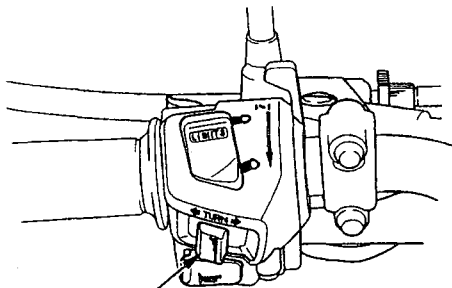

The turn signal switch is used to operate the turn signal lamps when turning left or right or changing lanes. The ignition switch must be 'ON'.

Push the switch to the turning direction.
Push in to cancel.

Tip

- The turn signal does not cancel automatically. Always cancel the switch after turning to avoid confusing other drivers.
- Use the lamp bulb with a correct watt. The turn signal lamp does not light correctly if the watt is not corresponding to the rate.
